Project Design Phase-II

Solution Requirements(Functional&Non-functional)

Date	13 october 2026
Team ID	6ab4a5100fc666a751b4361b
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Followinga rethefunctionalrequirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident UI Policy	Create the “High Impact Control” UI Policy for the Incident table; condition: Impact is 1 – High; make Assignment group mandatory; set Reverse if false to true.
FR-2	Urgency Field Control	Use a UI Policy Action to make the Urgency field read-only when Impact is High. Keep Visible unchanged.
FR-3	Automatic Urgency Update	Use an onChange Client Script on Impact to set Urgency to High when Impact is High and display the information message.
FR-4	Incident Save Validation	Use an onSubmit Client Script to prevent saving when Impact is High and Assigned To is empty; display the specified error message.
FR-5	Prevent State List Editing	Use an onCellEdit Client Script on State to show the alert and block direct State changes from the list view.
FR-6	Configuration Testing	Test mandatory enforcement, successful save, reverse condition, list edit blocking, and form-based State update.

Non-functional Requirements:

Followinga rethenon-functionalrequirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	UI Policies and Client Scripts control field behavior and provide information or error messages on the Incident form.
NFR-2	Security	The project document describes client-side field controls and validation. Other security implementations are not specified in the project document.
NFR-3	Reliability	The configuration checks required Incident information and blocks submission when the stated High-impact condition is not met.
NFR-4	Performance	Performance targets or optimization details are not specified in the project document.
NFR-5	Availability	Availability requirements or design details are not specified in the project document.
NFR-6	Scalability	Scalability requirements or architecture details are not specified in the project document.

Note: Requirements are based on the supplied project document. Items not described there are identified as not specified; no unrelated requirements have been added.
