Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	13 October 2026
Team ID	6ab4a5100fc666a751b4361b
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Technical Architecture:

Thearchitecturebelowisbasedonlyon the workflow and components described in the project document.

User	**Incident Form**	**UI Policy & UI Policy Actions**	**Client Scripts**	**Incident Record**
Opens and edits an Incident form	Incident table and form fields	Mandatory and read-only field behavior based on Impact	onChange, onSubmit, and onCellEdit validation/behavior	Validated Incident data is submitted or rejected

Flow: User → Incident Form → UI Policy / UI Policy Actions and Client Scripts → Incident record saved or submission blocked.

Table-1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	Incident form used to view and enter Incident details.	ServiceNow Incident form
2	Application Logic-1	Applies conditional field behavior when Impact is High; Assignment group is configured as mandatory.	UI Policy: High Impact Control; UI Policy Action
3	Application Logic-2	Sets Urgency to High when Impact changes to High.	onChange Client Script
4	Application Logic-3	Prevents saving a High-impact Incident when Assigned To is empty.	onSubmit Client Script
5	Database	Incident records and fields are used by the project.	Incident table; database technology not specified in the project document
6	Cloud Database	Not described in the project document.	Not specified in the project document
7	File Storage	Not described in the project document.	Not specified in the project document
8	External API-1	Not described in the project document.	Not specified in the project document
9	External API-2	Not described in the project document.	Not specified in the project document
10	Machine Learning Model	Not described in the project document.	Not specified in the project document
11	Infrastructure (Server / Cloud)	The project is implemented in a ServiceNow instance; deployment configuration is not described.	ServiceNow instance; server/cloud configuration not specified

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	No open-source framework is identified in the project document.	Not specified in the project document
2	Security Implementations	Client-side validation and UI controls are used to enforce the stated Incident form rules. Other security controls are not described.	UI Policies and Client Scripts
3	Scalable Architecture	Scalability architecture is not described in the project document.	Not specified in the project document
4	Availability	Availability design is not described in the project document.	Not specified in the project document
5	Performance	Performance design considerations are not described in the project document.	Not specified in the project document

Source note: Project-specific details above are taken from “Implement Client Script & UI Policy (Incident)”. Any template field not covered by that document is marked “Not specified in the project document” rather than being filled with outside assumptions.
