| Implement Client Script & UI Policy (Incident) | v1.0 |

## Project Overview

**ProjectDescription:**Incident records require consistent and accurate data entry to ensure effective triage, routing, and resolution. Manual checks can lead to incomplete, inconsistent, or incorrect data being submitted. This project enforces conditional field behavior and validation directly at the user interface level using ServiceNow UI Policies and Client Scripts.

**TestingPeriod:** [StartDate] to [EndDate]

## Testing Scope & Environment

**TestingScope:** UIPolicies (HighImpact Control), UI Policy Actions (Assignment group mandatory, Urgency read-only), onChange Script (auto-set Urgency), onSubmit Script (prevent save if Assigned To missing), onCellEdit Script (block list editing of State).

**Testing Environment:** ServiceNow Instance (URL/Location: [Web URL])
